

Sophos Firewall

Your security is our top priority

As a Sophos Firewall customer, our top priority is your security. We've not only invested heavily in ensuring your Sophos Firewall is the most secure firewall on the market, but we continuously work to make it the most difficult target for hackers, while helping keep your network and organization safe from future attacks through proactive monitoring.

SECURE BY DESIGN

1 | Best practices built-in

Desired outcome: Ensure the firewall's security posture is optimally configured.

Solution: A strong security posture depends on ensuring the firewall is optimally configured. Sophos Firewall not only has security best-practices built-in for optimally secure out-of-the-box deployment but it is also continually monitoring your firewall's configuration to identify any risky settings.

2 | Hardened against attack

Desired outcome: Prevent attacks from targeting the firewall.

Solution: Sophos Firewall is designed from the start with security in mind and is continually being hardened against attacks with new technologies. Sophos Central management ensures remote management is extremely secure. The firewall also supports MFA across all areas, containerization of user-facing portals and other trust boundaries, strict default access controls, and a new optimized Xstream architecture control plane and hardened kernel to eliminate complete classes of vulnerabilities.

3 | Automated hotfixes with no downtime

Desired outcome: Eliminate disruptions caused by patching.

Solution: In addition to important security fixes included in every firmware release, Sophos Firewall integrates an innovative automated zero-effort hotfix capability that enables us to push urgent and important patches out to your firewall "over the air" to address any new zero-day vulnerabilities or other critical issues that arise between regular firmware updates. This enables a rapid fix to be applied without requiring any downtime normally associated with a firmware upgrade.

4 | Proactive monitoring

Desired outcome: A security vendor that's proactive, transparent, and responsive.

Solution: Sophos security teams are continuously monitoring the integrity of our global install base of customer firewalls to rapidly detect and respond to any incident. You can rest assured that if a single customer anywhere in the world has their firewall attacked, we're working tirelessly to help shut the attack down and prevent it from happening elsewhere. Our mature vulnerability disclosure program ensures we are transparent and communicative with every security vulnerability or incident so you are as well equipped as possible to protect your network. We also offer the most active and well funded bug bounty program in the industry to get ahead of any potential issues before they can become a problem.
